

Yehor Shapanov

AI INFRASTRUCTURE | AGENTIC AI | ROBOTICS

Kyiv Metropolitan Area | hiiegorg@gmail.com | [linkedin.com/in/shapanov](https://www.linkedin.com/in/shapanov) | github.com/tkorsi

PROFILE

Software engineer and technical lead with 14 years of experience across distributed systems, cloud infrastructure, and applied AI. Currently focused on production LLM and multimodal inference on NVIDIA GPUs. Builds multi-agent AI systems and RAG workflows; robotics coursework includes inverse kinematics, dynamics, and control in simulation.

LLM inference
performance and reliability

Multi-agent systems

PROFESSIONAL EXPERIENCE

AI Infrastructure & Performance Engineer

May 2026 - Present

Echomind AI | Full-time, remote

- Optimize performance, reliability, and cost efficiency of production LLM and multimodal inference systems running on NVIDIA GPUs.
- Profile request queueing, prefill, decoding, and streaming; tune KV cache, context limits, continuous batching, concurrency, and workload admission to balance throughput with customer-facing tail latency.
- Benchmark TTFT, TPOT, token throughput, p95/p99 latency, GPU saturation, and long-context behavior; evaluate FP8 and multi-GPU/data- or tensor-parallel serving configurations on production-shaped workloads.
- Lead capacity planning, canary rollouts, observability, and incident analysis for GPU-backed LLM/VLM services across AWS and Runpod; isolate interactive traffic from background workloads.

Founder & Lead Researcher

Apr 2023 - Feb 2026

Undisclosed Startup (due to Brave1 incubator regulations) | Full-time

- Led generative-AI R&D; focused on realistic synthetic imagery and robust representations for autonomous-driving and computer-vision applications.
- Developed data pipelines and model experiments for NLP and image generation; worked with mathematicians and data scientists, and used AWS/Google Vertex AI for deployment, scaling, and real-time inference.

Technical Lead

Feb 2022 - Apr 2023

EvoPlay | Full-time, on-site | Kyiv

- Led PHP/Go backend and DevOps teams, coordinating cloud deployments, CI/CD, and system architecture with machine-learning teams.
- Collaborated on data preparation, NLP/CV, predictive analytics, and integration of models using Python, TensorFlow, PyTorch, Scikit-learn, AWS/GCP, SQL/NoSQL, and Kafka.

Senior Devops engineer

Aug 2020 - Jan 2022

Firebolt | Contract | Kyiv

- Owned cloud architecture and delivery processes for a large data-warehouse startup; stack included Kubernetes, Helm, Prometheus, Grafana, Loki, Thanos, ClickHouse, CockroachDB, gRPC, GraphQL, and AWS.

Working on my own Conversational Model

May 2020 - Aug 2020

Self-employed | Kyiv

- Built a seq2seq conversational-model prototype with encoder-decoder attention on AWS GPUs; worked with TensorFlow, LSTM/RNN, CUDA, NLTK, and NumPy.

EARLIER EXPERIENCE

- Delivery Manager**
Intellias | Kyiv

Dec 2018 - Feb 2020

- Aligned executive, product, and marketing stakeholders on strategy and requirements; coordinated remote teams, launch delivery, status, risks, and change control.
- Technical Team Lead**
EPAM Systems | Full-time | Kyiv / Los Angeles

Mar 2017 - Jan 2019

- Led mobile delivery, created pipelines, unified processes and tools, supported presales and workshops, and mentored colleagues.
- Senior iOS Developer**
NGT International | The Randstad, Netherlands

Oct 2015 - Feb 2017

- Built iOS banking applications and administration pages using Swift, Objective-C, AngularJS, ExpressJS, Node.js, and Python.
- iOS developer**
Yandex | Ukraine

Jul 2014 - Dec 2014

- Built an application from scratch, chose technologies and processes, and designed the REST backend API.
- Senior iOS developer**
Ciklum | Ukraine

Oct 2012 - Jul 2014

- Built Dacadoo from scratch, contributed to architecture and business decisions, and worked in a 10-12 person Objective-C/Xcode team.

AGENTIC AI AND ROBOTICS

- Multi-agent AI:** Builds multi-agent systems and coordinates teams of AI agents. Experience spans Python and TypeScript workflows.
- HybridRAG (accepted course project):** Python ingestion and chunking, Sentence Transformers embeddings, Chroma retrieval, Groq/LangChain generation, Streamlit UI, and a regex/spaCy entity-analysis path.
- AI in Robotics coursework:** inverse kinematics and motion planning; rigid-body dynamics, constraints, and contact simulation; partial control assignments in MuJoCo.

EDUCATION AND SELECTED CREDENTIALS

National Technical University of Ukraine 'Kyiv Polytechnic Institute' Master, Physics, Microelectronics 2005 - 2011 Coursera 2009 - 2013 Yandex School of Data Analysis: selected ML, NLP, generative-AI, and robotics coursework.	Probability theory - Computer Science Center, 2024 Combinatorics and Probability - UC San Diego / Coursera, 2019 Mathematical Analysis - Stepik, 2019 Real-Time Web with Node.js - Code School, 2015
--	---

SELECTED TECHNICAL SKILLS

Python, Go, TypeScript, C/C++, CUDA, SGLang, LLM inference, model serving, performance engineering, distributed systems, multi-agent systems, RAG, PyTorch, TensorFlow, Kubernetes, AWS, Runpod, Google Vertex AI, PostgreSQL, Redis, Kafka, Chroma, LangChain, MuJoCo coursework.
